

Science Wednesday 22/04/20

WALT name and identify some common wild plants.

What do you think a **wild** plant is?

A **wild plant** is a plant that grows by itself.

Look at the photos of 4 different **wild plants** below.

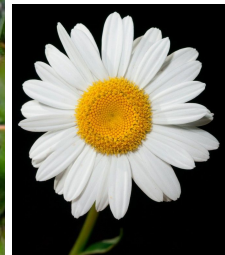

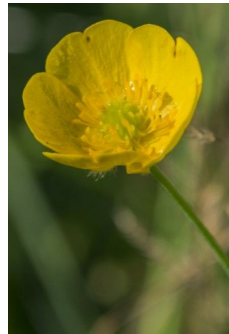

- Have you seen them before?
- Can you describe what they look like?
- What is similar and what is different about them?

Have a go at drawing each of them in your purple books.

Look carefully at the shapes and colours you can see in each plant.

Look at the photos again:

- Do you know the **names** of any of the plants?
- Do they remind you of anything?
- What **name** would you give each of them?

Here are the names of the plants but they have got mixed up!

Can you help us match the name to the plant?

Look at the words you can see in the names to help you.

daisy

bluebell

buttercup

dandelion

Well done for having a go at matching the names to the plants!

We'll look at the answers on Friday!
