WALT explore human evolution

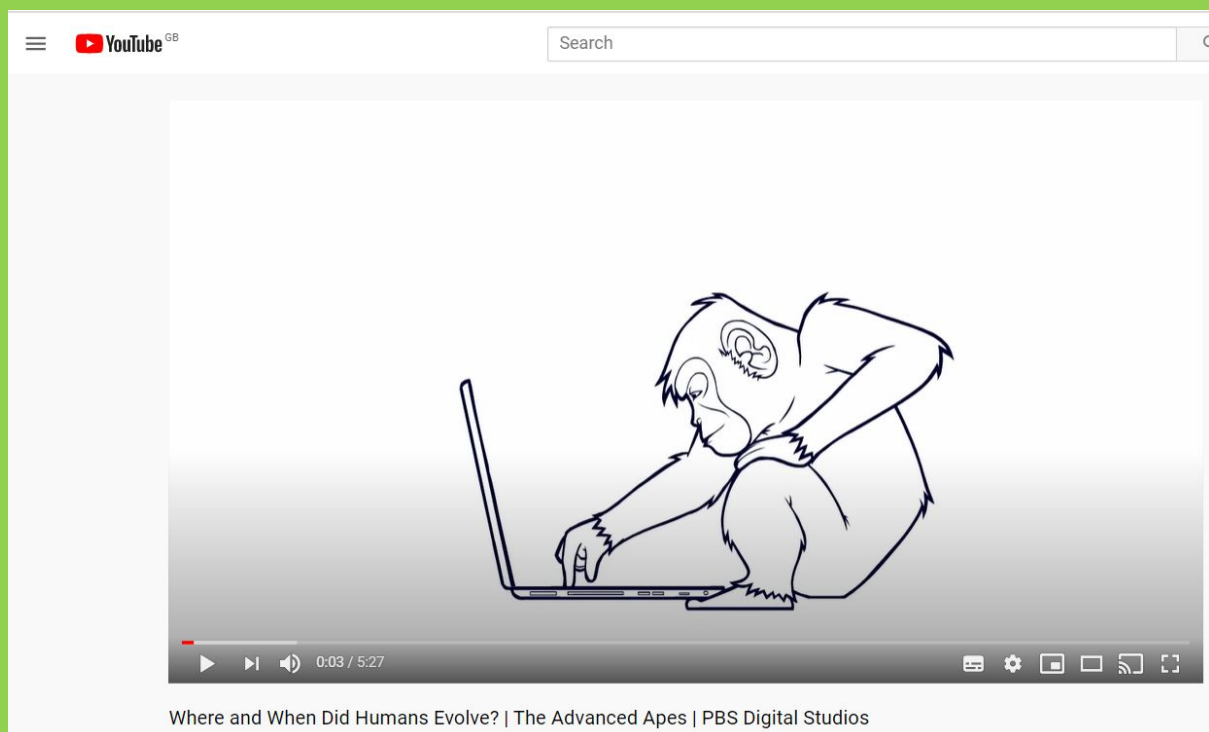

Today, you will be learning about what science tells us about human beings. Many scientists argue that human beings (Homo sapiens) evolved from different human-like animals called hominids and before that an ape-like creature.

You will be finding out about human evolution.

Watch this video:

WALT explore human evolution

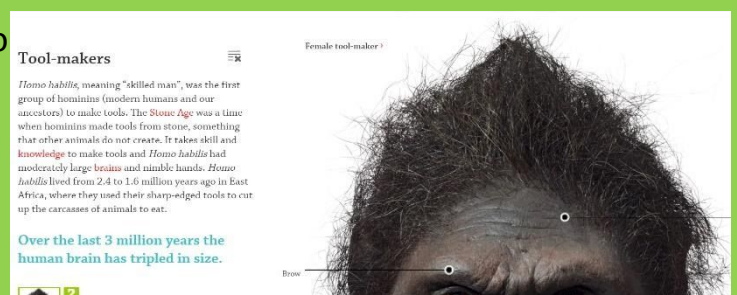

## Homo habilis

Here are questions about early hominids Click on the links to find out the information:

## Homo habilis

- 1) What does Homo habilis mean?
- 2) When did Homo habilis live?
- 3) What did Homo habilis learn to do

Thursday 23<sup>rd</sup> April 2020

WALT explore human evolution

## Homo erectus

Here are questions about early hominids Click on the links to find out the information:

### Homo erectus

- 1) What does Homo erectus mean?
- 2) When did Homo erectus live?
- 3) What did Homo erectus learn to do?
- 4) Where did Homo erectus originate from?
- 5) Where did Homo erectus migrate to?

WALT explore human evolution

## Neanderthals

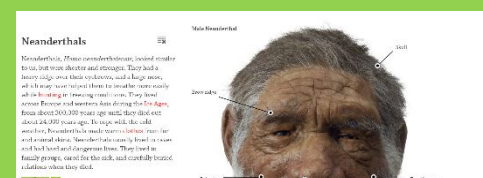

Here are questions about early hominids Click on the links to find out the information:

### Neanderthals

- 1) What did the Neanderthals live?
- 2) How were Neanderthals different to modern humans?
- 3) Neanderthals lived during the Ice Age. What features helped them to cope with freezing conditions?
- 4) When did Neanderthals die out?
- 5) Where did Homo erectus migrate to?

WALT explore human evolution

## Homo sapiens (Modern Humans)

Here are questions about early hominids Click on the links to find out the information:

## Homo sapiens (Modern Humans)

- 1) Where did modern humans first begin?
- 2) When did modern humans first evolve?
- 3) When did modern humans first reach all continents (except Antarctica)?
- 4) When did modern humans first begin to grow crops?
- 5) How were modern humans different from other hominds?
